Docket No.: 073358-031800 Application No.: 10/712.208

AMENDMENTS TO THE CLAIMS

 (Previously Presented): A method for preparing a hydrogen generation reactor chamber to reduce coking, the method comprising:

applying a cold spray of an alkaline oxide or oxides doped with alkali or alkaline earth metals, mixed with metal to at least one surface within the chamber.

- (Original): The method of claim 1 wherein the metal is selected form the group consisting of noble metals and alkaline metals.
- (Original): The method of claim 1 wherein the percentage of metal to alkaline oxide in the cold spray is about 50% to about 90%, respectively.
- 4. (Original): The method of claim 1 wherein said hydrogen generation reactor chamber is comprised of at least one of aluminum, stainless steel, titanium and high temperature refractory alloys suitable for hydrogen generation.
- (Original): The method of claim 1 wherein said hydrogen generation reactor chamber is further comprised of at least one port having a tube.
- 6. (Previously Presented): The method of claim 5 further comprising a step of applying a cold spray of an alkaline oxide or oxides doped with alkali metal or alkaline carth metals, mixed with metal to a surface of said tube, said application to said tube occurring either during said application of said cold spray to principal surfaces within the chamber or during a separate applying step.
- (Original): The method of claim 6 wherein said applying step is directed to at least an inner surface of said tube.
- (Original): The method of claim 6 wherein said applying step is directed to at least an outer surface of said tube.

Docket No.: 073358-031800 Application No.: 10/712,208

 (Original): The method of claim 6 wherein said tube protrudes into said hydrogen generation reactor chamber.

10. (Canceled).

- 11. (Original): The method of claim 1 wherein said hydrogen generation reactor chamber has a cover, said cover having applied thereto a cold spray of an alkaline oxide mixed with small quantity of metal.
- (Original): The method of claim 11 wherein said cover also has a hydrogen separation membrane incorporated therein.
- (Original): The method of claim 10, wherein said mesochannels have a width of about 0.3 mm to 2.5 mm.
- 14. (Original): The method of claim 10, wherein said mesochannels have a width of about the 0.5 mm to about 2.0 mm.
- 15. (Original): The method of claim 1, wherein said cold spray is applied to leave portions of said hydrogen generation reactor chamber uncoated for joining operations.
- 16. (Previously Presented): The method of claim 15, wherein said joining operations comprise at least one of welding, brazing or diffusion bonding.
- 17. (Original): The method of claim 1, further comprising applying said cold spray to any protrusion into said hydrogen generation reactor chamber.
- (Original): The method of claim 17, wherein said protrusions is at least one of tubings, thermowells and wells for sensor probes.
 - 19. (Canceled).
 - 20. (Canceled).

Docket No.: 073358-031800 Application No.: 10/712,208

 (Original): The method of claim 1 wherein said hydrogen generation reactor chamber is tubular.

- 22. (Original): The method of claim 21 wherein said tubular hydrogen generation reactor chamber has covers or end-caps that contain one or more tubes.
- 23. (Previously Presented): A method of fabricating a low temperature hydrogen generation reactor chamber for reduced carbon accumulation, the method comprising:

applying a cold spray of a mixture of metal and an alkaline oxide doped with alkali or alkaline earth metal to at least one surface within the chamber.

24. (Previously Presented): A method of preparing a hydrogen generation reactor chamber to reduce carbon formation on an inner surface of the hydrogen generation reactor chamber, the method comprising:

applying a cold spray of an alkaline oxide, doped with alkali or alkaline earth metal and mixed with metal, to the inner surface of the hydrogen generation reactor chamber.

25. (Previously Presented): A method of preparing a low temperature hydrogen generation reactor chamber to reduce carbon formation on an inner surface of the hydrogen generation reactor chamber, the method comprising:

spraying a gas-fill mixture, comprising a metal and an alkaline oxide doped with alkali or alkaline earth metal, to the inner surface of the hydrogen generation reactor chamber.
